

Basic Safety and Emergency Preparedness

Book at maersktraining.com

AVAILABLE LOCATIONS

Stavanger

AVAILABLE LANGUAGES

English, Norwegian

The course provides participants with basic knowledge and practical skills in offshore safety, accident prevention, first aid, fire protection, helicopter evacuation, evacuation methods and survival at sea for work on installations on the Norwegian Continental Shelf.

Essential Information

Prerequisites

Participants must complete the required e-learning before attending the practical training. The prerequisite requirements depend on the selected delivery option: Standard (Face to Face) Delivery: One prerequisite e-learning course must be completed before attendance. Blended Delivery: Two e-learning courses must be completed before attendance, with additional theoretical content completed online before the face-to-face training. Links to the required e-learning will be provided before attendance.

Who is it for?

Personnel who will stay or work on installations on the Norwegian Continental Shelf.

Assessment

Participants are assessed throughout all practical training. If a participant does not successfully complete the practical training, the reason for the assessment outcome will be provided. A theoretical examination based on the prerequisite e-learning is conducted on the first day of the course. Participants must complete the required theoretical assessment and demonstrate achievement of the competence objectives. For Competence Objective 3.8, evacuation from a helicopter or simulator, practical evacuation exercises 1–4 are mandatory and must be completed. Participants who do not meet the required competence objectives will not successfully complete the course.

Certification

Upon successful completion, you will receive a certificate valid for 4 years

Course content

- **Risk Awareness and Barriers**

Offshore risks, accident prevention, safety barriers and basic safety procedures.

- **First Aid**

Basic first aid principles and practical response to injuries and medical emergencies

- **Helicopter Evacuation**

Practical evacuation from a helicopter or helicopter simulator during emergency situations.

- **Evacuation Methods**

Use of relevant evacuation means and lifesaving equipment on offshore installations.

- **Emergency Preparedness**

Emergency response arrangements and resources used during accidents and major emergencies.

- **Fire Protection**

Fire prevention and practical use of relevant firefighting and protective equipment.

- **Sea Survival**

Practical survival techniques for emergency situations in rough sea conditions.

- **Safety Awareness**

Safety attitudes and awareness of how the physical and social working environment affects life, health and safety.

Key Learning Objectives

01 L01 – Explain basic offshore safety procedures, risk awareness, barriers and measures for preventing occupational accidents.

03 L03 – Demonstrate safe evacuation from a helicopter or helicopter simulator.

05 L05 – Use relevant evacuation and lifesaving equipment during offshore emergencies.

07 L07 – Describe relevant protective, firefighting and rescue equipment used on offshore installations.

02 L02 – Apply basic first aid during offshore emergency situations.

04 L04 – Use relevant fire protection and firefighting equipment during practical exercises.

06 L06 – Apply survival techniques in rough sea conditions.

08 L08 – Demonstrate awareness of emergency response arrangements and relevant requirements governing offshore operations.
