

Compressed Air Emergency Breathing System (CA-EBS) Addon Module with Shoulder Measurement

Book at maersktraining.com

AVAILABLE LANGUAGES

English, Norwegian

The course provides participants with the knowledge and practical skills required to use a Compressed Air Emergency Breathing System (CA-EBS) during helicopter travel in the UK offshore sector. The course is delivered in accordance with OPITO requirements for the UK sector.

Essential Information

Prerequisites

No prerequisites.

Who is it for?

Personnel travelling by helicopter in the UK offshore sector who have not previously completed a shoulder measurement. The shoulder measurement is carried out at the training centre before the course starts.

Assessment

Participants are assessed throughout all practical training. If a participant does not successfully complete the practical training, the reason for the assessment outcome will be provided. At the end of the course, participants must complete a theoretical test. Participants who do not demonstrate achievement of the required competence objectives will not successfully complete the course.

Certification

Upon successful completion, you will receive a certificate in accordance with OPITO requirements for the UK sector.

Course content

• Introduction

Introduction to CA-EBS and its use during helicopter travel in the UK offshore sector.

• Compressed Air

Use of compressed air during emergency situations.

• Practical CA-EBS Use

Practical deployment and use of the CA-EBS.

• Breathing Systems

Differences between emergency breathing systems used during helicopter evacuation.

• Associated Hazards

Hazards associated with the use of compressed air emergency breathing systems.

• Lifejacket Deployment

Practical deployment of the lifejacket during emergency situations.

Key Learning Objectives

01 L01 — Inspect a lifejacket and CA-EBS before use.

03 L03 — Describe the use and hazards of compressed air during an emergency.

05 L05 — Deploy the lifejacket correctly.

02 L02 — Explain the differences between emergency breathing systems.

04 L04 — Demonstrate practical use of the CA-EBS.

06 L06 — Demonstrate how to evacuate from a helicopter while using the CA-EBS system.
